Application for Internship – Deep Learning for Video Understanding (m/f/x)

Dear Sir or Madam,

I am writing to express my strong interest in the Internship for Deep Learning for Video Understanding at ZEISS. The opportunity to contribute to advanced visual computing and apply deep neural networks to interpret temporal and spatial video data aligns perfectly with my academic focus and hands-on project experience. As an Artificial Intelligence student with a proven track record in developing ML pipelines and working with complex computer vision applications, I am eager to bring my analytical skills to your innovative team in Munich.

I am currently pursuing my B.Sc. in Artificial Intelligence at the Deggendorf Institute of Technology, where my academic dedication was recognized with a DAAD scholarship. My theoretical foundation in deep learning is strongly supported by practical implementations. For instance, I independently engineered an ML application for clinical diagnostics. This project required advanced data preprocessing and model optimization, giving me direct experience in handling complex, high-dimensional data crucial foundation for training deep learning models on video data.

Furthermore, my role as a Student Assistant in the "Sweeper 247" project has honed my ability to handle continuous data streams. I develop resilient sensor data pipelines and perform hardware-software integration. Additionally, my work on an end-to-end classification pipeline for Environmental Monitoring (utilizing TinyML on ESP32-S3 hardware with TensorFlow Lite) demonstrates my capability to build, optimize, and deploy deep learning architectures in constrained environments while managing real-time data flow.

Through these projects, I have developed solid skills in Python and C++, and I am highly proficient with frameworks like TensorFlow, which are essential for neural networks. I thrive when translating theoretical deep learning concepts into functional, scalable code. I am particularly excited about the prospect of applying these skills to video data at ZEISS, a company renowned for pushing the boundaries of optical technologies and intelligent systems.

My experience as a university tutor has also strengthened my communication and project management skills. I am accustomed to guiding interdisciplinary teams, explaining complex technical concepts clearly, and collaborating effectively to solve problems.

I am available for a full-time internship starting in August 2026 for a duration of several months. I welcome the opportunity to discuss how my background, technical skills, and enthusiasm for computer vision can contribute to the success of your Deep Learning projects at ZEISS.

Yours sincerely,

Rownak
